Curriculum Vita Summary

Robert Hewitt, ASLA, is an Associate Professor of Landscape Architecture at Clemson University. He is currently the lead landscape architecture faculty with the School of Architecture's professional graduate program in health care design. He teaches urban design, interdisciplinary design, community design, site design, planning, history/theory, regional studies, and architecture special studies and seminars, as well as design implementation at undergraduate, graduate and PhD levels. He is the Professor of Record for the College of Architecture Arts and the Humanities' Rome Program.

His research interests include the influence of medicine on environmental design, sustainability and health, media and technology, and international education in landscape architecture. He has authored more than thirty peer reviewed articles and co-chaired three international conferences during the last ten years; and his work has been cited or reviewed in more than 60 national and international publications. He is the recipient of more than 25 honors and awards for teaching research and service. During this time he has been investigator or co-investigator for more than \$200,000 of funded grants. He has authored two conference proceedings, including *Landscape Imprints* in two editions.

Professor Hewitt is a principal in HewittNassar Studio working on projects in the United States and Egypt. His professional experience includes work with Peter Walker and Partners in Berkeley on a range of international and national award winning projects, and with Gary Strang and Michael Roche in San Francisco. His professional work has been honored with nine design and planning award at regional, national and international levels including finalist for the Rome Prize. He is a registered landscape architect in California and South Carolina.

The following paragraphs address several areas of his research, teaching and creative activities: the historical and contemporary influence of medical thought on environmental design, landscape representation and interpretation, and landscape architecture education.

Health, Environment, Representation and Interpretation

His research and scholarly activities concerning the influence of medical thought on environmental design have centered on the historical aspects of that influence, and the design of contemporary healthy environments that integrate medical geography and cultural interpretation. Published peer-reviewed and cited work examining the influence of medical thought on F L Olmsted design has appeared in the journals: *The Bulletin of the History of Medicine*, *The Bulletin of Anesthesia History*, and *Psychiatry on Line Italia*. Research addressing the influence of international medical thought on 19th-century cities and parks has been published in the peer-reviewed journals *Landscape Review*, and *CELA Selected Papers 2005*. Examples of research regarding the influences of medical thought on contemporary environments related to cultural interpretation and landscape epidemiology have also been published in *CELA Select Papers 2005* and *Landscape Review*. A collaborative project suggesting that the incorporation of landscape images from dreams is useful from the standpoint of evolutionary biology for the creation of more healthy and sustainable environments was published in *Landscape Forum*. He has recently been asked to contribute to a forthcoming *Landscape Journal* volume addressing health and design, and has received a Clemson fellowship to complete a book manuscript that examines the role of 19th and early 20th-century medical thought in shaping American public and private landscapes, particularly the influence of miasma theory, and philosophical and scientific psychology.

His creative and professional activity concerning health and design include continuing national and international consultation on healthcare facility design, including: the application therapeutic design principles for resort design in Vallkenburg, Holland and Shanghai, China; for healthcare facilities at Greenville Hospital's Alzheimer's Facility, Spartanburg Hospital's Health Care Village, and for the Medical University of South Carolina campus; the application of therapeutic design principles that incorporate non-Western medical approaches to health care design was employed at the Sharm al Sheik Neurological Center in Egypt. Creative and professional activity that blends sustainability, health and the environment includes: sustainable and healthy neighborhood design proposals for the City of Pittsburgh, Pennsylvania; sustainable and healthy community design proposals for Lake Conestee and Simpsonville, South Carolina; and Clemson University's "Green" Community Health Care Center.

His work concerning landscape representation and interpretation, expressed through in three exhibitions, the *San Francisco Garden Show* "Waterworks," *San Francisco Arts Commission, Exploration City Site: "Civic Center Viewing Chamber,"* and *The Public Art Fund, New York, Gardens in the City Series: "Steam Temple."* "Waterworks" explored sustainable design expression related to the interconnection of natural systems and urban infrastructure. "Steam Temple" addressed these same issues related to the establishment of a new infrastructure park within the Allen Street Mall in Lower Manhattan as part of a project sponsored by New York's Public Art Fund. "Civic Center Viewing Chamber," examines cultural perceptions and representations of the landscape using historic viewing devices to reconsider the environmental setting of San Francisco's Beaux-Arts Civic Center.

Landscape Architecture International Education

His research and scholarship related to landscape architecture international education has examined international education at CELA participating universities, internationalization and multiculturalism. He recently published comprehensive studies of landscape architecture international education in *Landscape Journal* and in *Landscape Review*. His work concerning international education extends to teaching and service activities, and to recent publications concerning international landscape architecture design and globalization. (*Critiques of Built Works of Landscape Architecture* and in *CELA Published Papers 2006 and 2008*). Related to his research and scholarship, he has been active in grant writing, participating in grant development, as a co-investigator, and advisor; and has been particularly active in the development of international projects, including projects in Luxor, Egypt.

Teaching and Service

While he has assumed a wide range of teaching and service activities, including:

1. Teaching basic design, site design, community design, technical courses, urban design and interdisciplinary design at graduate and undergraduate levels,

2. Chairing the department curriculum committee during the development of its Masters and PhD programs, organizing Clemson's symposium on leadership in landscape architecture for the Landscape Futures Initiative, and editing Clemson's CELA Select Conference Papers,

His teaching and service activities have broadly focused on international education and interdisciplinary collaboration. He has co-organized conferences and workshops with La Sapienza and Roma Tre Universities in Rome. He has been an invited participant in four national and international panels on international education, and is currently working on the internationalization of Clemson's landscape architecture program, having acted as an analyst for the department concerning its role in the College's Genoa program, its Barcelona program, Istanbul program, and its St Petersburg program. He has co-developed an exchange program between Clemson University and Ains Shams University, Cairo.

Awards

Professor Hewitt has received more than 30 international, national and regional awards for his professional and academic work. He has received awards from the College of Arts and Architecture at Penn State for the best peer-reviewed article of the year; from Clemson University for faculty excellence; from the Council of Educators in Landscape Architecture in recognition of excellence in teaching, research and service; from the Council of Educators in Landscape Architecture for teaching excellence in studio at the senior level, from the Governor of Luxor Egypt and from Ain Shams University, Cairo for his work on the redesign of Luxor and the Avenue of the Sphinxes; an Award of Excellence from the American Society of Landscape Architects and an Award of Honorable Mention from Landscape Architecture Magazine for the exhibition "Waterworks;" an Award of Merit from the American Society of Landscape Architects for the study of landscape architecture; and the Thomas Church Prize, from Department of Landscape Architecture, University of California, Berkeley. He has most recently been awarded two North Carolina, South Carolina and Georgia Tri-State ASLA awards for his work on the Luxor, Egypt Master Plan, two South Carolina ASLA awards for Analysis and Planning and for Design, and was named alternate winner of the Rome Prize in Landscape Architecture in 2008.
