Senior Jared Moore believes architecture students learn their lessons the hard way. "Architecture is dominated by difficult software," he says, and learning quickly is essential.

So, for the past two years, Moore has coached underclassmen in the intricate software, first as a paid tutor, then as a volunteer. Moore believes the skills and insight upperclassmen can share is essential, so he looked for a way to formalize the mentoring.

Now president of Clemson’s American Institute of Architecture Students chapter, Moore is working to give the mentoring program continuity by building it into the organization’s mission. "It’s students helping students, giving someone the tools they need to find their own way," he notes.

What is Clemson?
Thinking and dreaming bigger

Jennifer Rahn ’10 grew up in one of the poorest counties in South Carolina, where only 15 percent of the people have a college degree.

But Jennifer was smart and determined. After receiving many scholarship offers, she chose Clemson and our National Scholars Program for the education she desired. This first-generation college student and biological sciences major is now on track to becoming a pediatrician.

“New worlds have opened up for me since I came to Clemson,” says Jennifer. “I’ve had the chance to study in England, Scotland, France and Alaska. For someone who grew up rarely leaving the small town she was born in, this is quite a change. It’s made me think and dream bigger.”
