

Tech Talk
October 22, 2013
Anne Grant, University Libraries

Welcome

Today, we'll cover:

- Refworks/Endnote (Link to RefWorks from Library homepage: www.clemson.edu/library)
 - These are bibliographic management tools that can help you store and organize the resources that you use for your research. Each tool:
 - Creates bibliographies from a list of citations in pretty much any style imaginable
 - Stores full text of articles
 - In RefWorks, you can use Write and Cite, which will create in-text citations as you type your paper.
 - Is supported by CU Librarians
- Using citation tools in:
 - OneSearch – Add items to “cart” and then you’ll be able to see options to cite and export
 - Databases – Look for options to export or cite. In EBSCO databases, they are at the folder or record level.
 - Google Scholar – Go to “Settings” and then “Bibliography Manager” look for “Export Citations to:” and choose RefWorks. This will allow you to direct export from Google. Also, there is a Cite option that will show citation styles.

POLL: Do you use an online tool to help you create bibliographies?

POLL: Have you ever exported citations from a database?

Wrap Up

- Lots of formats
- **LibGuide for Citations:** <http://clemson.libguides.com/citationstyles>
