

Age, Calving Interval and Gestation Table

BC-1001 Revised: June, 2006

Dr. Larry W. Olson - Extension Animal Scientist

This table is useful for calculating a calf's age, a cow's calving interval, a cow's expected calving date and a cow's breeding date. The following are examples of how to use the table:

Calf Age

Weaning Date = July 1, 1996 = Day 547 + 1 for leap year = Day 548

Birth Date = November 15, 1995 = Day 319

Calf's Weaning Age = 548 - 319 = 229 days-old

Cow's Calving Interval

1996 Calving Date = March 5, 1996 = Day 429 + 1 for leap year = Day 430

1995 Calving Date = January 25, 1995 = Day 25

Cow's Calving Interval = 430 - 25 = 405 days

Cow's Expected Calving Date

1995 Breeding Date = February 10, 1995 = Day 41

Average Gestation Length for Cow's Breed = 283 days

Cow's Expected Calving Date = 41 + 283 = Day 324 = November 20, 1995

Cow's Breeding Date

1996 Calving Date = March 5, 1996 = Day 429 + 1 for leap year = Day 430

Average Gestation Length for Cow's Breed = 283 days

Cow's Breeding Date = 430 - 283 = Day 147 = May 27, 1995
