ARE YOU PREPARED FOR A CHEMICAL SPILL AT YOUR WORKPLACE OR HOUSEHOLD?

IS YOUR SPILL NEAR A STORMWATER INLET STRUCTURE, ROADWAY, OR LOCAL WATERBODY?

DO YOU:
- Have a Material Safety Data Sheet (MSDS) for chemicals and materials in your work area?
- Understand the methods of transport and paths a flowing chemical spill may take on your property?
- Have a plan in place to contain chemical spills and prevent them from adversely impacting or entering local drainage systems and waterways?
- Have access to chemical spill kits in your work place or absorbent materials in your household?
- Know who to contact to report and assist with chemical spills in your work place or household?
- Know who to contact in case of an emergency? (If it’s an emergency, call 911).

Knowing how to respond to a chemical spill, having prompt access to chemical spill cleanup equipment, and utilizing proper disposal practices of used spill kit equipment will help protect South Carolina waterways!
