Using audio/video recordings and photographs in research may make it difficult to maintain the confidentiality of human subjects. Therefore, certain precautions must be taken, whether the project is reviewed through Exempt, Expedited or Full review procedures. These precautions include:

- Research participants must be advised that their participation includes the use of audio/video recording or photography. Permission for being recorded or photographed will normally be included in the consent form. If consent forms are not used, the elements of informed consent must still be presented to the subjects.

- Before consenting to being recorded or photographed, subjects should be informed of:
  - the planned use of the materials, including storage, transcription, and access by persons other than the research team,
  - whether the participants’ responses or images will be attributed to them.

- Subjects must also be advised when the recordings/photographs will be erased or destroyed. While Federal regulations do not require retention of research data, please note that Clemson University’s Research Data Access and Retention Policy does. Please see the Clemson University Faculty Manual for details on this policy.

- The investigator must make proper arrangements for secure storage of all audio/video recordings or photographs and assure that their use complies with the procedures outlined in the informed consent form.

- The members of the research team may not use the recordings or photographs for purposes other than those specified in the consenting process, unless additional consent is secured prior to any additional use. Participants or their legal authorized representative must sign a release form before the photographs or recordings are used in advertisements, publications, or other media.

The Clemson University Office of General Counsel (ogc-l@clemson.edu, 656-3414) can help with the development of these release forms.
