

Clemson University Research Policies Manual

Office of Sponsored Programs

Determination of Individual Faculty Member's Sponsored Program Productivity

Approved: March 25, 2003

Effective: July 1, 2003

Section: Clemson University Research Credit Policy

Statement

To successfully evaluate the effectiveness of its faculty, a University needs to define appropriate methods to determine faculty productivity in instruction, research, and public service.

Purpose

The purpose of this administrative policy is to define the method to determine an individual faculty member's Sponsored Program Productivity.

Discussion

Faculty members are evaluated on all facets of instruction, research and public service. To ensure equity, where possible, the University needs to have an effective and efficient system to determine sponsored program productivity.

Policy

As one of the measures of sponsored program productivity, Clemson University will use "Research Credit to Project" to calculate faculty sponsored program expenditures and faculty sponsored program awards. The Principal Investigator/Co-Investigator(s) and Credit to Project shown on the Clemson University Sponsored Programs Internal Processing Form will be used for name and percent credit (Research Credit to Project). Reports will be generated after the close of each fiscal year.
