Re: Dust Testing Report
Kite Hill Recycling Center
Clemson University
Clemson, South Carolina
Terracon Project No. 86127158

Dear Mr. Newberry:

Terracon Consultants, Inc. (Terracon) conducted airborne dust testing during the paper recycling process at the Kite Hill Recycling Center located on the campus of Clemson University in Clemson, South Carolina. The evaluation was performed in general accordance with our IDC with Clemson University.

PROJECT DESCRIPTION

Terracon conducted limited dust testing during paper processing activities in the Kite Hill Recycling Center. Terracon representative Mr. Jeffrey Gurrie performed the evaluation on June 24, 2015, at the request of Mr. Robert Newberry. The purpose of this evaluation was to test general dust levels (respirable and total) at locations around the paper recycling equipment.

This evaluation was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions in the same locale. Terracon did not attempt to identify every potential exposure or hazard present in the subject building. The results, findings, conclusions, and recommendations expressed in this report are based on conditions observed during our investigation. The information contained in this report should not be relied upon to represent conditions that existed prior to or after this investigation. Terracon does not warrant the services of regulatory agencies, laboratories, or other third parties supplying information that may have been used in the preparation of this report.

INVESTIGATION CRITERIA AND METHODS

Total and respirable Dust

Dust measurements were made using a TSI DustTrak DRX in various areas during the recycling process. The instrument was placed at breathing zone in several areas in which operators could stand or be at during the process. The instrument was set to data log respirable and total dust for five minute in one second increments. Results were compared to the Occupational Safety and Health Administration (OSHA) Permissible Exposure Limits (PEL) for total dust of 15 mg/m^3 and respirable dust of 5 mg/m^3.

FINDINGS

A total of 14 locations were monitored during the paper recycling operation. The operation time varies on a daily basis and usually the process operates for approximately 1.5 hours. The highest total dust average was 3.46 mg/m^3 and the highest respirable dust average was 1.69 mg/m^3.

This operation was only performed for 1.5 hours and, if this exposure is uniform and extrapolated for a full shift, they would still be well below the OSHA PEL of 15 mg/m^3 for total dust and 5 mg/m^3 for respirable dust. The actual instrument data for the testing is attached.

CLOSING

Terracon appreciates the opportunity to provide this service to Clemson University. If you have any questions regarding this report, please contact the undersigned at 864-292-2901.

Sincerely,
Terracon Consultants, Inc.

Jeffrey A. Gurrie
Senior Project Industrial Hygienist

Ben Hestir, P.E.
Senior Industrial Hygienist
